

## REGATTA BEACH CLUB SELECTS H2O PROTECTION

### Rapid Water Shut-Off Solution Powered by PipeBurst Pro Completed

Coral Springs, FL, October 25, 2016– H2O Protection recently completed the installation of a Rapid Water Shut-Off Solution powered by PipeBurst Pro for the Regatta Beach Club based in Clearwater Beach, Florida. H2O Protection was selected due to the wide range of custom solutions to support the requirements of property management.

The Rapid Water Shut-Off Solution allows building management to completely shut down the domestic cold and hot water, air conditioner supply and return lines, multiple building recirculating pumps and hot water boilers in less than 5 minutes, protecting all 350 condominium residences. Prior to the implementation on the Rapid Water Shut-Off Solution, the previous manual shut down procedures took building management up to 45 minutes to complete.

The solution provided also includes the capability to drain any residual cold and hot water that might be present in the lines to the outside of the building, therefore significantly reducing the amount of water that may drain into the building through the broken pipe.

*Jerry Panagrossi the Property Manager at The Regatta Beach Club added “The solution provided by H2O Protection was delivered on time, within budget and performs as designed and promised. We could not have had a better partner then H2O Protection and PipeBurst Pro for the solution that we were looking for.”*

With these advanced building shut down capabilities, the Regatta Beach Club has reduce insurance claims, the need for restoration companies to clean up excessive water, reduced the possible of mold and mildew and virtually eliminated any water damage due to broken water pipes.

*Neil Schwartzman – Owner of H2O Protection commented “We are delighted that the Regatta Beach Club selected H2O Protection for protecting the residences and that they believed in our custom solutions to support their needs”*

#### **About H2O Protection and PipeBurst Pro:**

Leak Protection has become a prevalent topic among Home Builders, Homeowners, Homeowner Associations, Property Management Companies and Business owners, both large and small as well as the insurance industry. PipeBurst Pro unique wireless & wired sensor and FloMeter capabilities, working in conjunction with our industry leading online platform, [ionleaks.com](http://ionleaks.com), provides the protection everyone is looking for.

Leaks in pipes and major plumbing failures are more common in homes and businesses than we would like to admit, and it's easy to believe it will never happen to us. However, every year, thousands of buildings, belongings and assets are damaged by leaking water, valuable time is lost and many thousands of dollars are spent on restoration. Wouldn't it be nice to know you're protected?

If a leak occurs, sensors detect the water and sends a signal to immediately shut off the water. It's that simple. Today's homes contain more water source points than ever before - leaving your residence vulnerable to potentially disastrous leaks. H2O Protection can customize a detection and shut-off solution and offers multiple levels of installation to protect what matters most.

PipeBurst Pro is the highest-quality, most effective automatic pipe burst detection and water damage prevention system on the market. We offer outstanding customer service and have the best warranty in the industry, too.
